

WOMEN IN THE CITY OF MARIBYRNONG

WHY WOMEN'S HEALTH MATTERS

Women comprise approximately half the population in Maribyrnong and have different health and wellbeing needs from men. While it would appear that women and men have all the same formal opportunities, the unequal status of women in our community causes many to experience significant disadvantage, impacting on their safety and their physical, mental and social health and wellbeing.

To support women's health, safety and wellbeing, and to recognise and respond to men and women's different needs, it is imperative that we adopt a gender-sensitive approach to planning, policy, program and service provision.

KEY HEALTH PRIORITIES FOR WOMEN IN THE CITY OF MARIBYRNONG

Prevention of violence against women

- Reported family violence rates have significantly increased in Maribyrnong from 545.2 per 100,000 in 2010-2011 to 766.3 per 100,000 in 2011-2012¹

For Victorian women aged 15-44 years, intimate partner violence is the leading cause of illness, death and disability and is a greater contributor to the burden of disease than physical inactivity, unhealthy body weight, drug and alcohol-related harm and tobacco use.²

The notable increase in reported family violence incidents in Maribyrnong over recent years demonstrates that violence against women remains a significant and growing concern that requires redress.

Partnership opportunities with WHW to redress violence against women

Preventing Violence Together: Western Region Action Plan to Prevent Violence Against Women

This award winning project is the first collaboratively-developed, regional, primary prevention action plan of its type to prevent violence against women. It is comprised of a range of mutually reinforcing actions for signatory organisations to undertake, such as leadership commitment to prevention of violence against women, embedding gender equity practices into organisational plans and projects, and creating opportunities for men within organisations to engage in the promotion of positive masculinities.

VIOLENCE
TOGETHER

Western Region Action Plan to
Prevent Violence Against Women

Sexual and reproductive health

- The teenage fertility rate in Maribyrnong has increased, from 11.7 per 1,000 in 2005 to 13.2 per 1,000 in 2008 - this is higher than that for the western metropolitan region (8.9 per 1,000) and Victoria (10.6 per 1,000) for 2008³
- The proportion of young women in Maribyrnong who are using contraception to avoid pregnancy (70.4 per cent) is lower than the Victorian state level (78.9 per cent)⁴
- The participation rate for pap screening among women in Maribyrnong aged 20-24 years is a concerning 28.7 per cent⁵. This is substantially less than the overall state average of 60 per cent
- In 2011 in Maribyrnong there were 253 notifications of Chlamydia – this is an increase of 47.9 per cent over the last three years (2009-2011)⁶

Sexual and reproductive health is integral to supporting overall health and wellbeing. While the population of Victoria is one of the healthiest in the world, the burden of disease associated with poor sexual and reproductive health continues to increase.

An increase in teenage fertility rates, low pap screening rates and low proportion of contraceptive use all highlight the sexual and reproductive health of young women in Maribyrnong as a significant health priority. Additionally, high rates of sexually transmissible infections demonstrate the need to ensure that Maribyrnong health and wellbeing strategies support increased access to health services, accessible and affordable contraception, and sexual and reproductive health information and education.

Partnership opportunities to support sexual and reproductive health and wellbeing

Action for Equity: A sexual and reproductive health plan for Melbourne's West 2013-2017

Women's Health West is the lead agency in the Western Region Sexual and Reproductive Health Partnership, and is currently developing a regional action plan titled Action for Equity: A sexual and reproductive health plan for Melbourne's West 2013-2017. The action plan seeks to support strategic, integrated and sustainable sexual and reproductive health promotion throughout the western region. It has a strong emphasis on changing the systems and structures that enable good sexual and reproductive health by working to redress the social determinants of health. In order to do this, a strong and diverse partnership is needed.

Mental health and social connectedness

- Women constitute 84.1 per cent of the single parent population in Maribyrnong⁷
- In Maribyrnong, females are more likely than males to undertake unpaid childcare (22.9 per cent of women compared to 16.4 per cent of men)⁸
- Nearly a quarter (24.2 per cent) of women in Maribyrnong undertake more than 15 hours of unpaid domestic work a week, compared to 7.9 per cent of males⁹
- 11.3 per cent of females reported providing unpaid assistance to a person with a disability, compared to 7.4 per cent of males¹⁰
- Only half of all females (50.4 per cent) living in Maribyrnong reported that they participated in citizen engagement activities during the past year¹¹

The World Health Organisation outlines the importance of integrating a gender-sensitive approach to mental health promotion, policy, and program and service provision to ensure that the different needs of women and men are met.

The weight of greater childcare, domestic and caring responsibilities placed on women in Maribyrnong presents significant implications for their mental health and wellbeing. It is imperative that we support women and families with their caring responsibilities through provision of affordable and accessible childcare, disability support programs, health services and public transport.

Additionally, greater caring responsibilities and a lack of services can present barriers to women's opportunities for full social participation. Given that only half of the women living in Maribyrnong reported that they participated in citizen engagement activities in the past year, it is important that we support women's civic participation in local leadership and network opportunities.

Partnership opportunities with WHW to support mental health and connectedness

- Sunrise – a program that offers friendship, social connectedness, information and skills development for women in the west, who identify as having a disability.
- Power On – a strengths-based, peer education program that encourages women who experience mental illness to access information, develop skills and enhance their wellbeing.
- Lead On Again – a leadership program for culturally and linguistically diverse young women aged 16-24, studying, living or working in the western region.

Cultural diversity

- Approximately 40 per cent of female residents in Maribyrnong were born overseas¹² (3 per cent higher than for the western region)
- An estimated 24 per cent of female residents in Maribyrnong who speak a language other than English, speak English 'not well' or 'not at all'¹³
- Women comprise 48.6 per cent of the residents in Maribyrnong who identify as Aboriginal and/or Torres Strait Islander¹⁴
- Ethnicity and culture have largely been recognised as important social determinants of health. Residents of migrant and refugee background often face a variety of challenges in supporting their health and wellbeing, including gaining access to culturally appropriate services. In particular, women from migrant and refugee backgrounds are noted as being at greater risk of poorer health and wellbeing¹⁵

The high number of female Maribyrnong residents who were born overseas presents significant planning implications, including the need for culturally appropriate and accessible services, and health promotion programs that are tailored for the specific health and wellbeing needs of women from migrant and refugee backgrounds.

Particularly, the higher proportion of female residents in Maribyrnong who reported that they did not speak English well or not at all, means that additional resources are required to ensure women's access to services and entitlements, employment and educational opportunities, social support and opportunities for participation.

KEY SOCIAL DETERMINANTS IMPACTING ON THE HEALTH OF WOMEN IN MARIBYRNONG

The social determinants of health refer to the social structures that influence and determine our health and wellbeing, including the economic, social, cultural and political conditions in which we live. In order to improve health outcomes and to redress inequities it is imperative that we adopt a social model of health; recognising the profound impact that social determinants have on the health and wellbeing of communities.

Employment

- 35 per cent of females residing in Maribyrnong were not in the labour force, compared to 24 per cent of males¹⁶
- A higher number of women were employed in part-time work than men (20.1 per cent compared to 13.3 per cent)¹⁷
- Approximately 21 per cent of women in Maribyrnong have a weekly individual income of less than \$300 (compared to 16 per cent of males)¹⁸
- 9.1 per cent of women in Maribyrnong have an individual weekly income of greater than \$1,500, compared to 16 per cent of male residents¹⁹

A significant proportion of women in Maribyrnong are either not in the labour force, or are engaged in part-time employment. It is noted that women are over-represented in non-career focused part time jobs, and casual employment. Such work is often lowly paid and provides fewer opportunities for training, development and career progression.²⁰ Additionally, women regularly spend less time in the workforce because of childbearing and caring responsibilities, resulting in substantially less superannuation for retirement.

Women in Maribyrnong also report a lower weekly gross income than their male counterparts, impacting on their economic independence and financial security – and, in turn, their ability to leave a violent relationship. Strengthening women's access to education, employment and higher income opportunities in Maribyrnong are imperative strategies in supporting women's health, safety and wellbeing.

Education

- Over half of the women in Maribyrnong reported their highest year of schooling to be year 12 or equivalent²¹
- A higher proportion (2.6 per cent) of female residents than male residents in Maribyrnong did not go to school²²
- 29.4 per cent of female residents and 35.8 per cent of male residents have attained bachelor degree levels of education²³

Education has important implications for the health and wellbeing of populations; in particular, low levels of schooling can constrain employment opportunities, financial security, social connectedness and carries increased risk of poor health literacy. The differing levels of schooling and post-secondary education for male and female residents in Maribyrnong are therefore important to consider in health policy, program and service delivery.

Housing

- Approximately 24 per cent of households in Maribyrnong reported that housing costs were more than 30 per cent of their household gross income²⁴
- 37 per cent of households reported that they spend at least 30 per cent of their household gross income on rent²⁵

This data suggests that residents in Maribyrnong experience housing stress and affordability problems; high housing costs can severely deplete the residual income that people have available to spend on other essential items such as food, transport and health care.

Given that women in Maribyrnong have lower individual weekly incomes than their male counterparts, housing costs present significant implications for women on lower incomes – particularly sole parents with dependent children.

Public transport

- 32.2 per cent of women in Maribyrnong have experienced difficulties in utilising transport in the past 12 months, such as disability access and the costs of public and private transport (compared to 24.1 per cent of men)²⁶
- Women in the City of Maribyrnong were significantly more likely to report experiencing transport limitations over the past 12 months than men or women across the North West Metropolitan Region, or Victoria²⁷
- Less than half (46.8 per cent) of all females in Maribyrnong feel 'safe' or 'very safe' walking alone at night in their local area (compared to 77.7 per cent of males)²⁸

Access to affordable, safe and reliable transport (both public and private modes of transportation) greatly increases women's capacity to participate in their community; to engage in work and educational opportunities, access health services and programs, and join in social and sporting activities, including participation in physical activity.

Indeed, research suggests that men and women experience transport differently; women are less likely to have access to a car and are more likely to walk and use public transport. Infrastructure that is poorly maintained (such as poor lighting, low levels of natural surveillance, cracked footpaths and graffiti) can greatly influence how women perceive and experience safety in their local area²⁹

Women in Maribyrnong have lower individual weekly incomes than their male counterparts so housing costs present significant implications
