

# WOMEN IN THE CITY OF WYNDHAM

## WHY WOMEN'S HEALTH MATTERS

Women comprise approximately half the population in Wyndham and have different health and wellbeing needs from men. While it would appear that women and men have all the same formal opportunities, the unequal status of women in our community causes many to experience significant disadvantage, impacting on their safety and their physical, mental and social health and wellbeing.

In order to support women's health, safety and wellbeing, and to recognise and respond to men and women's different needs, it is imperative that adopt a gender-sensitive approach to health policy, planning and program and service provision.

# KEY HEALTH PRIORITIES FOR WOMEN IN THE CITY OF WYNDHAM

## Prevention of violence against women

- Between 2011-2012, there were 1,536 reported family violence incidents in Wyndham<sup>1</sup> accounting for 9.8 per cent of all those reported for the North West Metropolitan Region<sup>2</sup>
- Reported family violence rates have significantly increased in Wyndham from 856.9 per 100,000 in 2010-2011, to 925.1 per 100,000 in 2011-2012<sup>3</sup>

For Victorian women aged 15-44 years, intimate partner violence is the leading cause of illness, death and disability and is a greater contributor to the burden of disease than physical inactivity, unhealthy body weight, drug and alcohol-related harm and tobacco use.<sup>4</sup>

The notable increase in reported family violence incidents in Wyndham over recent years demonstrates that violence against women remains a significant and growing concern that requires redress.

## Partnership opportunities with WHW to redress violence against women

### **Preventing Violence Together: Western Region Action Plan to Prevent Violence Against Women**

This award winning project is the first collaboratively-developed, regional, primary prevention action plan of its type to prevent violence against women. It is comprised of a range of mutually reinforcing actions for signatory organisations to undertake, such as leadership commitment to prevention of violence against women, embedding gender equity practices into organisational plans and projects, and creating opportunities for men within organisations to engage in the promotion of positive masculinities.

**PREVENTING  
VIOLENCE  
TOGETHER**

Western Region Action Plan to Prevent Violence Against Women

## Sexual and reproductive health

- The teenage fertility rate in Wyndham in 2008 (12.9 per 1,000) was significantly higher than that for the western metropolitan region (8.9 per 1,000) and Victoria (10.6 per 1,000)<sup>5</sup>
- Only 41.1 per cent of sexually active adolescents in Wyndham practice safe sex with a condom – this is lower than the Victorian average, at 58.1 per cent<sup>6</sup>
- The proportion of young women in Wyndham who are using contraception to avoid pregnancy (50per cent) is lower than the Victorian state level (78.9 per cent)<sup>7</sup>
- The participation rate for pap screening among women in Wyndham aged 20-24 years is a concerning 35.5 per cent<sup>8</sup>
- In 2011 in Wyndham there were 521 notifications of Chlamydia – this is an increase of 81.5 per cent over the last three years (2009-2011)<sup>9</sup>

Sexual and reproductive health is integral to supporting overall health and wellbeing. While the population of Victoria is one of the healthiest in the world, the burden of disease associated with poor sexual and reproductive health continues to increase.<sup>10</sup>

An increase in teenage fertility rates, low pap screening rates and low proportion of contraceptive use all highlight the sexual and reproductive health of young women in Wyndham as a significant health priority.

Additionally, rates of sexually transmissible infections demonstrate the need to ensure that Wyndham health and wellbeing strategies support increased access to health services, accessible and affordable contraception, and sexual and reproductive health information and education.

## Partnership opportunities to support sexual and reproductive health and wellbeing

### **Action for Equity: A sexual and reproductive health plan for Melbourne's West 2013-2017**

Women's Health West is the lead agency in the Western Region Sexual and Reproductive Health Partnership, and is currently developing a regional action plan titled Action for Equity: A sexual and reproductive health plan for Melbourne's West 2013-2017.

The action plan seeks to support strategic, integrated and sustainable sexual and reproductive health promotion throughout the western region. It has a strong emphasis on changing the systems and structures that enable good sexual and reproductive health by working to redress the social determinants of health. In order to do this, a strong and diverse partnership is needed.

## Mental health and social connectedness

- Women constitute 84 per cent of the single parent population in Wyndham<sup>11</sup>
- In Wyndham, females are more likely than males to undertake unpaid childcare (29.1 per cent of women compared to 21.1 per cent of men)<sup>12</sup>
- Over a quarter (32.6 per cent) of women in Wyndham undertake more than 15 hours of unpaid domestic work a week, compared to 8.7 per cent of males<sup>13</sup>
- 12.1 per cent of females reported providing unpaid assistance to a person with a disability, compared to 7.8 per cent of males<sup>14</sup>
- Approximately half of all women (49.2 per cent) living in Wyndham reported that they participated in citizen engagement activities during the past year<sup>15</sup>

The World Health Organisation outlines the importance of integrating a gender-sensitive approach to mental health promotion, policy, and to program and service provision to ensure that the different needs of women and men are met.

The weight of greater childcare, domestic and caring responsibilities placed on women in Wyndham presents significant implications for their mental health and wellbeing. It is imperative that we support women and families with their caring responsibilities through provision of affordable and accessible childcare, disability support programs, health services and public transport.

Additionally, greater caring responsibilities and a lack of services can present barriers to women's opportunities for full social participation. Given that only half of the women living in Wyndham reported that they participated in citizen engagement activities in the past year, it is important that we support women's civic participation in local leadership and network opportunities.

### Partnership opportunities with WHW to support mental health and connectedness

- Sunrise – a program that offers friendship, social connectedness, information and skills development for women in the west, who identify as having a disability.
- Power On – a strengths-based, peer education program that encourages women who experience mental illness to access information, develop skills and enhance their wellbeing.
- Lead On Again – a leadership program for culturally and linguistically diverse young women aged 16-24, studying, living or working in the western region.

## Cultural diversity

- Approximately 33.6 per cent of female residents in Wyndham were born overseas. This is higher than the Victorian average of 26.4 per cent<sup>16</sup>
- An estimated 13.6 per cent of female residents in Wyndham who speak a language other than English, speak English 'not well' or 'not at all'<sup>17</sup>
- Women comprise 49.3 per cent of the residents in Wyndham who identify as Aboriginal and/or Torres Strait Islander<sup>18</sup>
- Ethnicity and culture have largely been recognised as important social determinants of health. Residents of migrant and refugee background often face a variety of challenges in supporting their health and wellbeing, including gaining access to culturally appropriate services. In particular, women from migrant and refugee backgrounds are noted as being at greater risk of poorer health and wellbeing<sup>19</sup>

The high number of female Wyndham residents who were born overseas, presents significant planning implications including the need for culturally appropriate and accessible services, and health promotion programs that are tailored for the specific health and wellbeing needs of women from migrant and refugee backgrounds.

Particularly, the higher proportion of female residents in Wyndham who reported that they did not speak English well or at all, means that additional resources are required to ensure women's access to services and entitlements, employment and educational opportunities, social support and opportunities for participation.

# KEY SOCIAL DETERMINANTS IMPACTING ON THE HEALTH OF WOMEN IN WYNDHAM

The social determinants of health refer to the social structures that influence and determine our health and wellbeing, including the economic, social, cultural and political conditions in which we live. In order to improve health outcomes and to redress inequities it is imperative that we adopt a social model of health; recognising the profound impact that social determinants have on the health and wellbeing of communities.

Women in Wyndham have lower individual weekly incomes than their male counterparts so housing costs present significant implications

## Employment

- 35.4 per cent of females residing in Wyndham were not in the labour force, compared to a lesser 20.4 per cent of males<sup>20</sup>
- A higher number of women in Wyndham were employed in part-time work than men (22.4 per cent compared to 10.3 per cent)<sup>21</sup>
- Approximately 33.5 per cent of women in Wyndham have a weekly individual income of less than \$300 (compared to 18.7 per cent of males)<sup>22</sup>
- 16.7 per cent of male residents in Wyndham have an individual weekly income of greater than \$1,500, compared to 4.8 per cent of women<sup>23</sup>

A significant proportion of women in Wyndham are either not in the labour force, or are engaged in part-time employment. It is noted that women are over-represented in non-career focused part time jobs, and casual employment. Such work is often lowly paid and provides fewer opportunities for training, development and career progression.<sup>24</sup> Additionally, women regularly spend less time in the workforce because of childbearing and caring responsibilities, resulting in substantially less superannuation for retirement.

Women in Wyndham also report a lower weekly gross income than their male counterparts, impacting on their economic independence and financial security – and, in turn, on their ability to leave a violent relationship. Strengthening women's access to education, employment and higher income opportunities in Wyndham are imperative strategies in supporting women's health, safety and wellbeing.

 21 Ibid  
 22 Ibid  
 23 Ibid  
 24 Western Australian Labour Relations Division, 2012, *Why is there a gender pay gap?*, Government of West Australia, Australia.

## Education

- 11.9 per cent of female residents and 11.5 per cent of male residents reported their highest year of schooling to be year nine or below<sup>25</sup>
- A higher proportion (1 per cent) of female residents than male residents in Wyndham did not go to school<sup>26</sup>
- 25 per cent of women and 38.3 per cent of men have attained a certificate level of education, while 27.5 per cent of women and 19.2 per cent of men have bachelor degree levels of education<sup>27</sup>

Education has important implications for the health and wellbeing of populations; in particular, low levels of schooling can constrain employment opportunities, financial security, social connectedness and carries increased risk of poor health literacy. The differing levels of schooling and post-secondary education for male and female residents in Wyndham are therefore important to consider in health policy, program and service delivery.

## Housing

- Approximately 24.9 per cent of households in Wyndham reported that housing costs were more than 30 per cent of their household gross income (a higher proportion than for the North West Metropolitan Region, at 23.1 per cent)<sup>28</sup>
- 32.2 per cent of households reported they spend at least 30 per cent of their household gross income on rent<sup>29</sup>

This data suggests that residents in Wyndham experience housing stress and affordability problems; high housing costs can severely deplete the residual income that people have available to spend on other essential items such as food, transport and health care. Given that women in Wyndham have lower individual weekly incomes than their male counterparts, housing costs present significant implications for women on lower incomes – particularly sole parents with dependent children.

25 ABS 2011, *Census of Population and Housing*, Australian Bureau of Statistics, Australia  
 26 Ibid  
 27 Ibid  
 28 Community Indicators Victoria, 2012, *Wellbeing Reports*, Community Indicators Victoria, Melbourne.  
 29 Ibid

## Public transport

- Over a quarter of all women (26.4 per cent) in Wyndham have experienced difficulties in utilising transport in the past 12 months, such as disability access and the costs of public and private transport (compared to 22.9 per cent of men)<sup>30</sup>
- Well less than half (34.8 per cent) of all females in Wyndham feel 'safe' or 'very safe' walking alone at night in their local area (compared to 69.1 per cent of males)<sup>31</sup>
- Female residents in Wyndham reported a lower perception of safety when walking alone at night in their local area (34.8 per cent), than for women for the North West Metropolitan region (48.8 per cent)<sup>32</sup>

Access to affordable, safe and reliable transport (both public and private modes of transportation) greatly increases women's capacity to participate in their community; to engage in work and educational opportunities, access health services and programs, and to join in social and sporting activities, including participation in physical activity.

Indeed, research suggests that men and women experience transport differently; women are less likely to have access to a car and are more likely to walk and use public transport. Infrastructure that is poorly maintained (such as poor lighting, low levels of natural surveillance, cracked footpaths and graffiti) can greatly influence how women perceive and experience safety in their local area<sup>33</sup>
